Abstract: Revised Checklist of the Lepidoptera of Turkey. *Cent. ent. Stud., Priamus Suppl.* 17: 1-253.

In this study, totally 5182 species of the Lepidoptera recorded in Turkey are listed in 76 families. Synonymous names are also mentioned. Provincial distributions are given as codes to each species if available. Vernacular names in Turkish are also mentioned if present. Additionally 1770 genus group lepidopteran names represented in Turkey are arranged alphabetically in 76 families.

Keywords: *Lepidoptera*, genera, species, provincial distribution, vernacular names, Turkey.

Within the frame of the Cesa Projects¹, entitled the *Lepidoptera of Asia* (LAS), and the *Lepidoptera of Old World* (LOW), the first attempt on the Checklist of the Turkish Lepidoptera was made by the authors (Koçak & Kemal, 2006)². In this publication, totally 5029 species are listed under 76 families. Synonyms, Turkish vernacular names, and provincial distributions are also mentioned. Later, the authors (Koçak & Kemal, 2007)³ published a more comprehensive list on the same subject. Totally 6555 valid species group taxa were enumerated. Among them, 5101 species and 1454 subspecies were listed alphabetically. Provincial distributions in Turkey were revised and given as codes. Larval foodplants were added to the 1648 species.

In the present list, totally 1770 genus group names recorded in Turkey, are given for the first time. Besides, 405 butterfly and 4777 moth species (increased to totally 5182 species) are listed together with their synonymous names and updated provincial distributions. Vernacular names in Turkish are also mentioned, if present.

This list is still incomplete. Studies on the taxonomical problems of some butterfly and moth groups are continuing. However, the authors believe that it will be useful for the scientists and the amateurs interested in the Lepidoptera of Turkey, as there is no such complete, updated and published list on this subject.

List of the genus group names of the Lepidoptera recorded in Turkey

Below, 1770 valid genus group names are listed alphabetically together with their family names, and synonymous generic names; the latter are arranged chronologically.

The presented information are based upon the Info-system of the Cesa.

List of the species of the Lepidoptera recorded in Turkey

Below, 5182 valid specific names are listed alphabetically in 76 families, together with their family names, and synonymous specific names; the latter are arranged chronologically. Updated information on the provincial distributions of the species are also given.

The nomenclaturally unavailable names, including incorrect spellings are marked with #.

In the first part, the butterflies recorded in Turkey so far are presented as 405 valid species in 9 families. Two species *Polyommatus aroaniensis* (Brown) and *Polyommatus semiargus* (Rott.) are recently found in Turkey in Europe, Kırklareli Province by Tamer Arda, Timur Arda, Ufuk Karaca, and Vildan Bozacı from the team of the Kelebek Türk.⁴ The images of these butterflies in nature will be illustrated soon in the webpage of Kelebek Türk. In the second part, the moths are arranged alphabetically according to their families. Totally 4777 species and 67 families recorded in Turkey are listed here for the first time.

The presented information are based upon the Info-system of the Cesa.

⁴ Kelebek Türk <http://www.kelebek-turk.com/index.php> We thank sincerely to the team of the Kelebek Türk for their valuable contributions to the butterfly fauna of Turkey and their excellent illustrations of the butterflies in nature.
